MOTORVATE

THE GROUND BREAKING SAFETY SOLUTION FOR YOUR YOUNG DRIVER

If you want to watch your children graduate from university, cry at their weddings, celebrate their twenty-first birthdays, and play with grandchildren yet unborn – you can't afford not to read Motorvate.

Young drivers are much more at risk during their first years on the road. Yet, until now, there has been little positive, practical information to assist parents to face this critical time with confidence instead of fear. That's where Motorvate comes in – it's an intelligent yet very readable answer to the novice driver dilemma, and it's specifically designed for worried parents. Motorvate is not a how to drive manual, although it contains plenty of life-saving driving tips and techniques. Rather, the book looks at young drivers in a completely new way, and provides enlightening solutions to the questions parents most need answers to, such as:

- why young drivers are unsafe drivers and how to change this;
- what a Guru Driver is, and how you'll know if your child is one;
- whether your child is a Debut Driver, a Daring Driver, or a Driveaholic, and why it matters;
- why lots of learner driving time, or enrolling your child in a safe-driving course, or buying your child a safe car, may not make your child any safer; and
- whether you should get your 'rev-head' son involved in motorsport.

Physics in Motion PowerPoint

Following the success of our Physics in Motion Science Program, Safe Drive Training is developing the **Physics in Motion PowerPoint** presentation. The 200+ slide program will investigate the science of driving and car control from a technical point of view. The PowerPoint can be used as a stand-alone item or to complement attendance at the practical Science Excursion. For delivery in April 2011.

Tyre Awareness DVD

The only part of a car in contact with the road is its tyres, however most drivers have a limited understanding of the role tyres play in safe driving. This program is under development by Safe Drive Training to educate road users on the importance of tyres, how to select the right ones and how to maintain them. The presenter is a trained motorsport tyre fitter who has conducted Tyre Launch events in Australia and Asia for companies like Yokohama, Michelin, GT Radials, Starfire, Federal, Cooper and BFGoodrich Tyres.

SAFE DRIVING HANDBOOK

VERSION 2

Safe Drive Training is developing this new version of our Safe Driving Handbook to address the many driving myths, attitudes and behaviours of novice drivers. The handbook attempts to openly confront the many aspects of driver behaviour that self repeat daily on Australian roads and too often go unpunished, unchallenged and often unnoticed by the police and transport authorities. These behaviours are known to be symptoms of larger problems with regards to driver safety.

(Available from April 2011)
